4.4 Overview of Cellular Respiration Flashcards | Quizlet

Cellular respiration is a metabolic pathway that breaks down glucose and produces ATP. The stages of cellular respiration include glycolysis, pyruvate oxidation, the citric acid or Krebs cycle, and oxidative phosphorylation.

Lesson Overview

Cellular Respiration: An

Overview In aerobic respiration, oxygen is essential for ATP

production. In this process, sugar (in the form of glucose) is

oxidized (chemically combined with oxygen)

to yield carbon dioxide, water, and ATP. The

chemical equation for aerobic cellular

respiration is $C_6H_{12}O_6$

+ $6O_2 \rightarrow 6CO_2 + 6H_2O$
