You should check your fluid every 30,000 to 60,000 miles in a manual transmission car. Failure to do so can cause your transmission fluid to become contaminated with bits of metal from the bearings, synchronizers and gears. This can make shifting difficult or impossible.

### **How to Troubleshoot a Manual Transmission That Will Not Shift**

If your transmission shifts too quickly into a gear it will make your car “jerk” or accelerate too quickly on that shift. The most common cause of hard shifts is a low fluid level, so check your fluid level and add BlueDevil Transmission Sealer if it is low.

not running. It won't come out of the reverse gear when the car is running.

### **The Reasons for Manual Transmission Won't Go into Gear ...**

If you're new to driving a manual transmission, or a stick shift as it's commonly referred to, it can seem scary. It can also feel uncomfortable as you learn to transition between gears and you feel the vehicle shake and the RPMs run high. But driving a manual transmission smoothly is actually really easy.

### **4 Ways to Drive Smoothly with a Manual Transmission - wikiHow**

**Bearings:** When bearings are worn and begin to bind or offer resistance hard shifting occurs. A manual transmission uses needle roller bearings between the driven gears and the main shaft they spin on. This enables the gears to spin freely when not fastened to the shaft by the synchronizer hub assembly.
