CRAN - Package nnet

The package NNET created by Ripley provides methods for using feed-forward neural networks with a single hidden layer, and for multinomial log-linear models.

Specifically, this chapter of the book will be portrayed NNET method. Below is briefly described the

nnet package | R Documentation

The R language has an

Where To Download Package Nnet R

add-on package named nnet that allows you to create a neural network classifier. In this article I'll walk you through the process of preparing data, creating a neural network, evaluating the accuracy of the model and making predictions using the nnet package.

Neural Networks Using the R nnet Package -- Visual

Where To Download Package Nnet R Studio ...

R has a few packages for creating neural network models (neuralnet, nnet, RSNNs). I have worked extensively with the nnet package created by Brian Ripley. The functions in this package allow you to develop and validate the most common type of neural network model, i.e, the feed-forward multi-layer perceptron.

predict.nnet function | R Documentation

To build the multinomial model we have a couple of functions in R.

However, in this example we use `multinom()` function from `{nnet}` package. Remember when we build logistic models we need to set one of the levels of the

Where To Download Package Nnet.R

dependent variable as a baseline. We achieve this by using `relevel()` function.
