Relativity - Relativity - General relativity:
Because Isaac Newton's law of gravity served so well in explaining the behaviour of the solar system, the question arises why it was necessary to develop a new theory of gravity. The answer is that Newton's theory violates special relativity, for it requires an

Theory of relativity - Wikipedia

When there is no gravity present, then the metric coefficients (g_t) and (g_x) converge back to 1, and we say that the space is "flat," giving us once again special relativity. Of course the "hard part" of general relativity is determining how the metric coefficients arise from what we already know is the source of
