Suturing Techniques in Oral Surgery - Dentalbookshop

Technique The procedure is simple and repetitive. A single interrupted suture is used to make the initial tie. The needle is next inserted through the outer surface of the buccal flap and the underlying surface of the lingual flap. The needle is then passed through the remaining loop of the suture, and the suture is pulled tightly, thus locking it. This procedure is continued until the final suture is tied off at the terminal end 146

SUTURES AND SUTURING - LinkedIn SlideShare

This suture technique uses several strands of suture material to close the wound. After a stitch is made, the material is cut and tied off. This technique leads to a securely closed wound.
