alignment is your key to better-performing tube radios, and my latest DVD video will teach you exactly what it is and how to do it. Watch and you'll better understand how the sensitive RF, IF, and oscillator circuits in your radio work, and how with just a signal generator and a volt meter, you can fine-tune them so that your vintage radio is as sensitive and selective

improves reception and the signal from the radio gets stronger, lower the generator's output and/or move the signal source and radio farther apart. You don't want the radio's AVC or AGC circuitry to kick in as this will make it difficult or impossible to measure changes. If the radio starts squealing back off the adjustment a bit.
